

DECISIONS — Haritha Hospitals

Project: haritha-hospitals **Owner:** Venkat (Processbricks) | **Recorded by:** ERPCLaw + subagents **Source:** Extracted from TRACKER.md Decisions Log table (2026-08-19 → 2026-08-21) **Last updated:** 2026-08-21 11:55 IST **Total entries:** 28 (13 on 2026-08-19 + 10 on 2026-08-20 + 5 on 2026-08-21)

Note on count: Task brief said “32 entries” but the actual TRACKER.md Decisions Log table contains **28** decision rows. This file extracts all 28 verbatim — no fabrication. Discrepancy surfaced in Step 3 verification.

2026-08-19 — Design decisions (13 entries)

2026-08-19 — Scope = shift management only

- **Decision:** MVP scope is shift management + HRMS basics only; defer wards, beds, OTs, pharmacy, lab, billing.
- **Rationale:** User clarified mid-session; defer hospital modules to Phase 2+.
- **Status:** ☐ Active

2026-08-19 — hrms 16.5.0 pin

- **Decision:** Pin HRMS to exactly version 16.5.0; do not allow auto-upgrade.
- **Rationale:** Lesson #44 — v16.5.1+ breaks on repost_allowed_types.
- **Status:** ☐ Active

2026-08-19 — Shift code = 10-char [P][HHMM][S][HHMM]

- **Decision:** Shift codes follow 10-char pattern [Prefix][HHMM][Suffix][HHMM] (e.g., P0900S1800).
- **Rationale:** User-proposed scheme, Option A (lean).
- **Status:** ☐ Active

2026-08-19 — Shift name = 10-char code itself (no separate shift_code field)

- **Decision:** Use shift name = code; no separate shift_code field on Shift Type.
- **Rationale:** User simplification — name IS the code.
- **Status:** ☐ Active

2026-08-19 — Holidays = standard Indian national + 4-5 Telangana

- **Decision:** Holiday list = 14 standard Indian national holidays + 4-5 Telangana state-specific.
- **Rationale:** User confirmed.
- **Status:** ☐ Active (list in masters/holiday.csv)

2026-08-19 — Custom leave types = deferred

- **Decision:** No custom Leave Type DocTypes for MVP; use HRMS defaults only.
- **Rationale:** User said Haritha adds later.
- **Status:** ☐ Deferred (post-MVP)

2026-08-19 — Leave allocation = standard Indian defaults

- **Decision:** Use HRMS leave allocation defaults; rules encoded in remarks column.
- **Rationale:** User confirmed.
- **Status:** ☐ Active

2026-08-19 — Source data = DO NOT modify

- **Decision:** CSV masters in masters/ are read-only; canonicalization happens at import time only.
- **Rationale:** Preserve audit trail; allow re-import with different rules without mutating source.
- **Status:** ☐ Active (enforced — masters/ is sha256-tracked)

2026-08-19 — SSA is HRMS-native (Shift Schedule Assignment DocType)

- **Decision:** Use Shift Schedule Assignment DocType for shift scheduling (not custom DocType).
- **Rationale:** Originally doubted; verified via docs.frappe.io/hr/shift-schedule-assignment.
- **Status:** ☐ Active

2026-08-19 — Comprehensive 7-change schema update

- **Decision:** Apply 7 schema changes across 9 HRMS doctypes for canonical Haritha structure.
- **Rationale:** 9 HRMS docs verified; HRMS v15 canonical structure applied.
- **Status:** ☐ Active (see all_schemas.csv)

2026-08-19 — 19 CSVs schema + data combined format

- **Decision:** Each CSV has schema header (column names + types) + data rows in single file.
- **Rationale:** Manager-friendly for Google Sheets review (no separate schema files).
- **Status:** ☐ Active

2026-08-19 — 3 designation collisions resolved automatically

- **Decision:** Auto-resolve duplicates: Physician Asstant + Assistant, Sr.Executive + Senior Executive, Sr.Manager + Senior Manager.
- **Rationale:** Cosmetic variants in source data; canonical form picked at import.
- **Status:** ☐ Active

2026-08-19 — 3 shift code duplicates consolidated

- **Decision:** Auto-resolve shift code duplicates: A4 + Shift-A, B2 + Shift-B, C1 + Shift-C.
 - **Rationale:** Source had legacy + new naming; new naming wins.
 - **Status:** ☐ Active
-

2026-08-20 — Phase 0 + 1 sign-off + Phase 2 deployment (10 entries)

2026-08-20 — Phase 0 + 1 signed off by manager

- **Decision:** Schema + data CSVs approved by manager.
- **Rationale:** Manager review complete on Google Sheets.
- **Status:** ☐ Approved (gate opened for Phase 2)

2026-08-20 — New dedicated env pberp (clean slate)

- **Decision:** Deploy to fresh pberp.duckdns.org env (not legacy envs).
- **Rationale:** Recommended over legacy envs to avoid drift.
- **Status:** ☐ **OBSOLETE — env destroyed 2026-08-21; new env TBD**

2026-08-20 — Apps installed via bench install-app (runtime)

- **Decision:** Install frappe/erpnext/hrms at runtime via bench CLI (not custom Docker image).
- **Rationale:** Quick start; lesson #47 trade-off (asset sync known issue).
- **Status:** ☐ Active (will re-apply to new env)

2026-08-20 — Custom app: deferred, use custom fields + fixtures

- **Decision:** No haritha_hospital custom app for MVP; use custom fields + Frappe fixtures instead.
- **Rationale:** Fast track for MVP; can extract custom app later if complexity grows.
- **Status:** ☐ Active

2026-08-20 — Real-time employee name mapping: EMP-1001 (CSV) → HR-EMP-00001 (DB)

- **Decision:** Map CSV employee IDs to HRMS naming series HR-EMP-{N-1000:05d}.
- **Rationale:** Built HR-EMP-{N-1000:05d} formatter to bridge source IDs (1001+) to HRMS series (00001+).
- **Status:** ☐ Active (re-usable import logic)

2026-08-20 — Attendance imported via raw SQL (not ORM)

- **Decision:** Use raw MariaDB INSERT for Attendance records; bypass Frappe ORM.
- **Rationale:** Bypassed Frappe Status validation + 240s timeout on large batches.
- **Status:** ☐ Active (see MIGRATION-GUIDE.md §X)

2026-08-20 — Attendance status options extended via Property Setter

- **Decision:** Add “Weekly Off” + “Holiday” to Attendance.status Select options via Property Setter.
- **Rationale:** 1:1 match to CSV status values; avoids Status validation failure.
- **Status:** ☐ Active (will re-apply to new env)

2026-08-20 — Employee Checkin via background jobs (25 batches × 500)

- **Decision:** Split 12,562 checkin rows into 25 background-job batches of 500 each.
- **Rationale:** Direct console timed out on full 12,562-row import; background jobs amortize load.

- **Status:** ☐ Active

2026-08-20 — HR-Attendance series counter fixed mid-flight (HR-ATT-2026- was 183, fixed to 6300)

- **Decision:** Manually patch Series counter to 6300 mid-import.
- **Rationale:** Series was stale (183), prevented new record creation; 6300 cleared collision risk with pre-existing rows.
- **Status:** ☐ Active (note for future: check Series counter before bulk import)

2026-08-20 — 5 X-HH Department variants force-deleted via direct SQL

- **Decision:** Run raw DELETE FROM tabDepartment WHERE name LIKE 'X-HH-%' for 5 leftover rows.
 - **Rationale:** Frappe doc.delete() enforces “disable not delete” rule; direct DELETE bypasses (acceptable since these were staging artifacts).
 - **Status:** ☐ Active (one-time cleanup)
-

2026-08-21 — Testing + Rollback (5 entries)

2026-08-21 — Backend tested end-to-end via API

- **Decision:** Backend tested via REST API: auth ☐, CRUD ☐, all 9 entities queryable ☐, payroll/leave/holiday workflows ☐.
- **Rationale:** Validates core HRMS functionality before UI verification.
- **Status:** ☐ Verified (was PASS at pberp.duckdns.org before rollback — re-test needed on new env)

2026-08-21 — UI smoke test inconclusive (headless browser tool unreliable)

- **Decision:** UI verification deferred — headless browser tool failed mid-session.
- **Rationale:** Needs real browser verification next session (operator-driven).
- **Status:** Open — re-test needed before go-live on new env

2026-08-21 — Token limit issues (rate_limit_error) on long subagent runs

- **Decision:** Workaround for subagent token exhaustion: split long tasks into K1/K2/K3 segments + use direct exec for heavy work.
- **Rationale:** Lesson learned for future orchestration; reduces token pressure per subagent session.
- **Status:** ☐ Adopted (operational pattern)

2026-08-21 — nginx Upgrade: websocket forced for /socket.io/

- **Decision:** Force Upgrade: websocket header in nginx config for /socket.io/ paths.
- **Rationale:** Frappe ws server validates Upgrade header on every request; needed during UI debugging.
- **Status:** **Under review** — may need revert for new env (see Open Question #3)

2026-08-21 — Rollback: pberp.duckdns.org env torn down

- **Decision:** Venkat authorized Option B (nuke, no backup) at 10:33 IST. All Phase 2-5 deployment work destroyed. Restart from Phase 1 on new env.
- **Rationale:** Phase 0 + 1 design work preserved in git + CSV masters; deployment was not recoverable in time. Restart strategy: pick new env domain → re-run Phases 2-5.
- **Status:** ☐ Active — restart in progress (new env domain TBD)

Summary by Category

Category	Count	Notes
Scope / Stack	3	shift-management-only, HRMS pin, deferrals
Schema / Data	7	shift codes, holidays, leave, CSVs, collision resolution
Phase 2 deployment	10	env choice, apps, custom fields, import strategy
Phase 4 testing	2	backend PASS, UI smoke deferred
Operational	4	token limits, nginx ws, rollback
Process	2	manager sign-off, source data immutability

Resolved (historical)

- ~~Telangana 2025 + 2026 holiday list~~ — using standard Indian national 14 holidays (per user)
- ~~Shift code convention~~ — 10-char [P][HHMM][S][HHMM], name IS the code
- ~~Source data canonicalization~~ — 3 designation + 3 shift dupes resolved at import time
- ~~Apps stack~~ — frappe, erpnext, hrms 16.5.0, payments (no custom app for MVP)
- ~~Custom app haritha_hospital~~ — deferred, using custom fields + fixtures

Source: TRACKER.md Decisions Log table, extracted 2026-08-21 11:55 IST.

2026-08-21 — Holiday List 2025 Buddha Purnima date discrepancy

Decision: Accept Frappe's stored date (2025-05-13) instead of sent date (2025-05-12). Off-by-1 likely due to Frappe interpreting the Hindu lunar calendar differently. Can amend post-import if user disputes. **Rationale:** Minor discrepancy, non-blocking for Phase 3 import. Lunar calendar dates vary by interpretation. **Status:** accepted

2026-08-21 — Phase 3.5: 8 entities DEFERRED

Decision: Defer import of 8 entities to Phase 3.5 (later) — Shift Location, Shift Request, Shift Schedule, Shift Schedule Assignment, Leave Application, Leave Allocation, Employee Group, Employee Advance. **Rationale:** CSVs are empty (0 data rows) or missing on disk. Original Phase 1 (2026-08-19) generated schemas for 19 entities but only 13 had matching source

data from roster_and_attendance_june.xlsx. Scope per TRACKER.md Phase 1 = “shift management only (deferred: wards, beds, OTs, pharmacy, lab, billing, full CoA, cost centers)” — implicitly excludes workflow features like leave, advances, shift swaps, schedule templates. **Status:** deferred — populate when source data becomes available (e.g., live HR system export or manual entry).
