

Speaker Script — Haritha Hospitals Client Demo

30–45 min · 11 slides · Companion to 03.4 Client Deck Run pre-demo smoke test (03.2) 5 min before going live. Have offline-screenshot fallback ready.

Slide 1: Title — Haritha Hospitals

Duration: ~1 minute **Opening:** “Good morning/afternoon everyone. I’m Venkat Narasimha from Processbricks. Today I’ll walk you through how we’ve built a hospital-specific ERP on ERPNext + HRMS, custom-fit to Haritha Hospitals’ 24/7 operations.” **Key points:** - This is a working production system, not a pitch deck - Goal: show you the product, then answer your questions - 30–45 min, with live demo in the second half **Demo moment:** n/a **Anticipated Q&A:** - Q: “Is this live?” → A: “Yes — we’ll switch to the demo site in slide 8.” **Transition:** “Let’s start with what we’ll cover today.”

Slide 2: Agenda

Duration: ~1.5 minutes **Opening:** “Here’s our roadmap for the next 35 minutes. Everything before the demo is context — so when you see the system live, you know exactly what problem it solves.” **Key points:** - Sections 1–5 build the “why”; section 6 is the live demo - Sections 7–10 cover customizations and differentiators - Section 11 is open Q&A — bring your toughest questions **Demo moment:** n/a **Anticipated Q&A:** - Q: “How long is the demo?” → A: “About 10 minutes of live walkthrough.” **Transition:** “First, the problem we set out to solve.”

Slide 3: The Challenge

Duration: ~3 minutes **Opening:** “Before we talk software, let’s name the pain. Hospitals are 24/7 operations with 200+ employees across departments — and shift errors aren’t just HR headaches, they’re patient safety risks.” **Key points:** - Shift scheduling errors → wrong staff on duty during a code - Manual attendance reconciliation eats supervisor time every day - Payroll disputes from shift mismatches erode HR trust - No single source of truth means decisions made on stale spreadsheets - Pause on “patient safety risk” — same data decides who’s on shift when an incident happens **Demo moment:** n/a **Anticipated Q&A:** - Q: “How many employees today?” → A: “210+ across departments, scaling as we onboard.” - Q: “What was the worst shift error before?” → A: “Late-arrival pattern went undetected for a week — caught in payroll dispute.” **Transition:** “So how do we solve it? Open source, customizable, hospital-specific.”

Slide 4: Why ERPNext + HRMS

Duration: ~3 minutes **Opening:** “We chose ERPNext + HRMS for three reasons: open source (no vendor lock-in), deeply customizable, and it has a healthcare-specific module already shipping.” **Key points:** - Open source means your code, your data, your control - 274 production-validated customizations for Haritha - Healthcare module ships out of the box; HRMS is HR-first - 5,000+ active contributors keep the platform moving - Read the room: CFO cares about cost, IT lead about no lock-in, HR head about HRMS-first **Demo moment:** n/a **Anticipated Q&A:** - Q: “What’s the total cost vs SAP/Oracle?” → A: “No per-user fees; one-time implementation

+ optional support.” - Q: “What if Frappe goes away?” → A: “Code is yours in Git; you can self-host indefinitely.” **Transition:** “Now let’s walk through the daily shift workflow.”

Slide 5: Shift Workflow — Daily Operations

Duration: ~4 minutes **Opening:** “This is what a normal day looks like at Haritha. Six touch-points from 6 AM to 10 PM — and most of them are automated.” **Key points:** - 06:00 — supervisors review the day’s roster - 06:30-08:00 — employees check in via mobile or biometric - Real-time geo-fence verifies check-in is within 200m of the Hyderabad location - HRMS auto-marks Attendance from Employee Checkin records - Mid-day: supervisors fix missed checkins and leaves manually - 22:00 — final reconciliation, payroll preview ready **Demo moment:** n/a — but flag that we’ll see this in action at slide 8 **Anticipated Q&A:** - Q: “What if someone forgets to check in?” → A: “Supervisor can mark manually; grace periods built in.” - Q: “Is the geo-fence strict?” → A: “Configurable per site; we use 200m here.” **Transition:** “Behind the scenes, this runs on 25 shift types — let me show you how they’re organized.”

Slide 6: Shift Types & Color Coding

Duration: ~3 minutes **Opening:** “Twenty-five shift types, but organized by a simple prefix convention: G for General, M for Morning, A for Afternoon, N for Night. Each gets a color, and the colors carry through the entire UI.” **Key points:** - G (General) = blue, M (Morning) = green, A (Afternoon) = orange, N (Night) = violet - Naming: ‘[Type][StartHHMM][R/S][EndHHMMh]’ — e.g., ‘G0900R0830’ = General 09:00, Regular 8.5h - 25 specific shift types = 4 base patterns × variants - 24/7 coverage with the four color-coded patterns **Demo moment:** n/a — visual only **Anticipated Q&A:** - Q: “Can we add new shift types?” → A: “Yes — from the UI, no code needed.” - Q: “Why a naming convention?” → A: “Lets supervisors read rosters at a glance; matches HRMS-native flag format.” **Transition:** “This brings us to the screen HR opens first thing every morning.”

Slide 7: Shift Management — Our Differentiator

Duration: ~3 minutes **Opening:** “This is the single most-used screen at Haritha. The Roster — color-coded, drag-and-drop, with geo-fence, biometric, and approvals built in.” **Key points:** - Color-coded Roster (G=blue, M=green, A=orange, N=violet, —=grey for off) - Drag-and-drop assignment — no spreadsheets - Geo-fenced check-in at 200m radius - Auto-attendance via biometric or mobile - Grace periods handle late arrivals fairly - Shift swap requests with multi-level approval - Holiday-aware scheduling **Demo moment:** n/a — but call this out as the headline screen for the live demo **Anticipated Q&A:** - Q: “What about a sick day at 2 AM?” → A: “Employee marks in app, manager approves from mobile, Attendance auto-updates.” - Q: “Can the roster print?” → A: “Yes — printable view per department and week.” **Transition:** “Now let’s see all of this working live.”

Slide 8: Live Demo

Duration: ~10 minutes **Opening:** “Switching to the demo site. Run the smoke test 5 minutes before this moment — if anything’s off, we have offline screenshots as fallback.” **Key points:** - Start with the Roster — 210 employees, color-coded by shift - Assign a new employee to a shift,

drag-and-drop style - Approve a leave request from the manager inbox - Run payroll preview to show end-to-end flow - Pause for questions between moments; don't rush **Demo moment:** Full live walkthrough — 4 high-impact moments **Anticipated Q&A:** - Q: "Can we add a custom field on the fly?" → A: "Yes — show the Customize Form menu live if time." - Q: "What if the network drops?" → A: "Fall back to screenshots in the appendix; everything is reproducible." **Transition:** "Behind the UI, there's a custom app that makes all of this possible."

Slide 9: Customization Showcase — 'haritha_hospital'

Duration: ~3 minutes **Opening:** "Everything you just saw is customized for Haritha. The magic is that all of it — every field, every workflow, every print format — lives in Git." **Key points:** - 78 Custom Fields, 189 Property Setters, 3 Print Formats - 2 Notifications, 2 Letter Heads — fully branded - All in Git, all deployable, all version-controlled - Reproduce any environment in 3 commands: get-app, install-app, migrate - Zero patches to upstream Frappe/ERPNext **Demo moment:** Optional — show the GitHub repo if projector permits **Anticipated Q&A:** - Q: "Who can modify the code?" → A: "Any Frappe developer; we hand off with documentation." - Q: "What if a Frappe upgrade breaks something?" → A: "274 fixtures, well-documented; we test upgrades in staging." **Transition:** "So why pick Haritha + ERPNext over a typical ERP vendor? Five reasons."

Slide 10: Why Choose Haritha + ERPNext

Duration: ~3 minutes **Opening:** "Five differentiators. Some you'll see at other vendors, but the combination — built-for-healthcare, open-source ownership, battle-tested, modular, and locally supported — is rare." **Key points:** - Built for healthcare — 274 customizations, not generic - Open source ownership — your code, your data, your control - Battle-tested at scale — 210+ employees, 8,000+ shift assignments, 24/7 - Continuous customization, not big-bang — modular, weekly ship cadence - Local support + global community — Processbricks + 5,000+ Frappe contributors - Bottom line: hospital ERP, customized for you, code you own, support you trust **Demo moment:** n/a **Anticipated Q&A:** - Q: "What's the support response time?" → A: "Severity-based; documented in the SLA." - Q: "Can we phase the rollout?" → A: "Yes — 4-week pilot available, then 8-week full rollout." **Transition:** "That brings us to Q&A — and the floor is yours."

Slide 11: Q&A

Duration: ~5-10 minutes (open-ended) **Opening:** "We've covered the challenge, the solution, the workflow, and the differentiators. Now — what questions do you have?" **Key points:** - Common questions are pre-loaded on the slide (timeline, self-host, backups, scale, code ownership, multi-company, biometric, multi-language, mobile, cost) - If a question is out of scope: "Great question — let me note that and get back to you within 24 hours with a detailed answer." - Capture every question in the meeting notes; follow up same day - End with a clear next step: schedule a deep-dive or pilot kickoff **Demo moment:** Spin back to specific slides as needed **Anticipated Q&A:** See the on-slide table; supplement with 03.3 FAQ **Transition:** "Thank you. I'll send the follow-up email by end of day with the recording, slides, and answers to anything we parked."
