

Haritha Phase A — Build haritha_hospital + Export Fixtures

Date: 2026-08-28 16:50-16:54 IST ($\approx$ 3 min 47 s wall clock) **Site:** pberpprod.duckdns.org (Frappe 16.30 / ERPNext 16.31 / HRMS 16.5.0) **Operator:** Vijay / SSH 144.217.163.228 → container erp-prod-backend-1

1. App created —

- **Location:** /home/frappe/frappe-bench/apps/haritha_hospital/
- **Initial commit:** 232696c feat: Initialize App (single commit only)
- **Module path:** apps/haritha_hospital/haritha_hospital/
- **Created via:** bench new-app haritha_hospital (interactively answered prompts)
- **App metadata populated by bench new-app:**
 - app_title = "Haritha Hospitals"
 - app_description = "Haritha Hospitals customizations - fixtures for env replication"
 - app_publisher = "Processbricks"
 - app_email = "processbricks@example.com"
 - app_license = "mit"
- **Note on setup.py:** Frappe v16 uses pyproject.toml (PEP 621), not legacy setup.py. install_requires was added to pyproject.toml dependencies = ["hrms>=16.5.0"] instead.
- **License prompt quirk:** Bench rejects MIT uppercase; valid answer is mit.

2. App installed on pberpprod —

- **Command:** bench --site pberpprod.duckdns.org install-app haritha_hospital
- **Output:** "Installing haritha_hospital... Creating Workspace Sidebars / Creating Desktop Icons / Updating Dashboard for haritha_hospital"
- **Warning (harmless):** frappe.core.doctype.duckdb_sync.duckdb_sync.cleanup_old_syncs is not a valid method — pre-existing Frappe core issue, unrelated to haritha.
- **installed_apps verification (via frappe.get_single("Installed Applications").installed_applications):**
 - APP: frappe
 - APP: erpnext
 - APP: hrms
 - APP: haritha_hospital

3. hooks.py configured —

- Added immediately after app_license = "mit":

```
# Fixtures to export (Haritha customizations)
fixtures = ["Custom Field", "Property Setter", "Print Format", "Letter Head", "Notification"]
```
- Top metadata block now reads:

```
app_name = "haritha_hospital"
app_title = "Haritha Hospitals"
```

```

app_publisher = "Processbricks"
app_description = "Haritha Hospitals customizations - fixtures for env replication"
app_email = "processbricks@example.com"
app_license = "mit"

# Fixtures to export (Haritha customizations)
fixtures = ["Custom Field", "Property Setter", "Print Format", "Letter Head", "Notificati

```

4. init.py version check — ☐ implemented + tested

- File now has `__version__ = "0.0.1"` plus `check_hrms_version()` that:
 1. Looks for `/home/frappe/frappe-bench/apps/hrms/hrms/__init__.py`
 2. Parses the `__version__` line
 3. If HRMS version `< 16.5.0`, calls `frappe.throw(...)`
- **Tested manually** — found HRMS = 16.5.0, comparison returns True for `>= 16.5.0`, install proceeded.

5. Fixtures exported — ☐ but filtering required (see §6)

- **Command:** `bench --site pberpprod.duckdns.org export-fixtures --app haritha_hospital`
- **Path:** `/home/frappe/frappe-bench/apps/haritha_hospital/haritha_hospital/fixtures/`
- **Files generated + counts:**

File	Count	Expected (per directive)	Notes
custom_field.json	78	78	☐ exact match
property_setter.json	189	~3	☐ includes 186 framework defaults
print_format.json	48	1	☐ includes 45 framework defaults
letter_head.json	2	2	☐ both Haritha
notification.json	8	2	☐ includes 6 framework defaults

- **Backup:** fixtures/ archived to `/root/.openclaw/workspace/projects/haritha-hospitals/phase-a/fixtures.tar.gz` for offline review.

6. ⚠ STOP — Property Setter NOT filtered correctly

- **Expected:** ~3 Haritha-specific property setters.
- **Got:** 189 rows. ALL rows have **no app column populated** (verified `frappe.db.has_column("Property Setter", "app") == False`).
- **Verified actual Haritha-specific PSs in DB (3 only):**
 1. Shift Type-color-default → default = "blue" (modified 2026-08-28 10:41:17)
 2. Shift Type-color-options → color options including blue/cyan/etc.
 3. Attendance-status-options → Present / Absent / On Leave / Half Day / Work From Home / Holiday / Weekly Off

- **The other 186 rows** are stock PSs: Sales Invoice-commission_section-hidden, Lead-utm_analytics_section-hidden, dozens of *-scan_barcode-hidden (2026-08-26 batch), etc. — all installed by Frappe/ERPNext/HRMS app code, not Haritha customizations.

△ Same issue affects Print Format and Notification

- **print_format.json** — 48 rows. Module breakdown:
 - Accounts 22, Selling 6, Regional 5, Stock 4, None 3, Payroll 3, Buying 3, HR 2
 - The 3 module=None records (likely Haritha custom): Drop Shipping Format, Cheque Printing Format, Payment Receipt Voucher
 - **Note:** “Drop Shipping Format” name sounds like ERPNext stock too — needs manual review.
- **notification.json** — 8 rows. Module breakdown:
 - HR 3, None 2, Accounts 1, Payroll 1, Manufacturing 1
 - The 2 module=None records: Error Log, Integration Request — **these are stock Frappe notifications, NOT Haritha customizations.**
- **letter_head.json** — 2 rows, both custom (Company Letterhead, Company Letterhead - Grey) □
- **custom_field.json** — 78 rows, all Haritha □

Recommendation (for Venkat review)

The fixtures = [...] mechanism in hooks.py is too coarse — it dumps ALL records of the doctype globally. For Property Setter and Print Format we need **curation**: 1. **Option A — Custom export script** that uses filters (e.g. module=None, or doc_type whitelist) to write only Haritha-specific rows to property_setter.json / print_format.json / notification.json. 2. **Option B — app_include_specific_doctype_fields / per-doctype export hooks** in hooks.py — bench actually supports a dict form fixtures = {"Property Setter": [{"dt": "...", "filters": {...}}], ...} since Frappe 14.

Not done in this scope per directive (“Stop after step 5 + remote setup. Do NOT commit or push”).

7. Git remote — □ configured, NO push

- **Remote added:** origin = git@github.com:venkat-narasimha/haritha_hospital.git
- **Current state:**
 - 1 commit: 232696c feat: Initialize App
 - Working tree changes (uncommitted):
 - * M haritha_hospital/__init__.py
 - * M haritha_hospital/hooks.py
 - * M pyproject.toml
 - * ?? haritha_hospital/fixtures/ (5 new JSON files)
 - **NO push attempted** — git ls-remote origin failed (no SSH client in container) but no fetch/push has been run.
- **Per Venkat directive: STOP. No additional commits. No push.**

8. Self-verification checklist

- ☒ App directory exists with module files
- ☒ hooks.py has fixtures = [...] line
- ☒ __init__.py has version check (check_hrms_version)
- ☒ installed_apps includes haritha_hospital

- ☒ Fixtures directory has 5 JSON files
- ☐ Property Setter JSON has expected 3 rows (**189 instead** — STOP per directive)
- ☒ Git remote configured (no push)

9. Total wall clock

≈ **3 min 47 s** (16:50:57 → 16:54:44 IST)

Files saved to workspace

- /root/.openclaw/workspace/projects/haritha-hospitals/phase-a/REPORT.md (this file)
- /root/.openclaw/workspace/projects/haritha-hospitals/phase-a/fixtures.tar.gz (exported fixtures, 39 KB compressed)
- /root/.openclaw/workspace/projects/haritha-hospitals/phase-a/logs/step1_newapp.log
- /root/.openclaw/workspace/projects/haritha-hospitals/phase-a/logs/step3_install.log
- /root/.openclaw/workspace/projects/haritha-hospitals/phase-a/logs/step4_export.log

☐ **STOPPED — Awaiting Venkat review before commit/push and before any fixture curation work.**
